

# KALPIT GOR

Senior Xamarin / .NET MAUI Developer

Senior Xamarin / .NET MAUI developer with **5+ years of experience** building high-performance cross-platform mobile applications for Android and iOS. Proficient in **C#, MVVM, .NET Core, Azure**, and Bluetooth Low Energy (BLE) integrations. Strong background in Agile delivery, REST API design, and cloud-first architecture.

## PROJECT PORTFOLIO (13 Projects)

1

### SMD Mobile – Xamarin to .NET MAUI Migration

Sept 2025 – Present

Full migration of the SMD Mobile application from Xamarin.Forms to .NET MAUI, delivering improved performance, long-term platform support, and a modernised MVVM architecture.

- Migrated entire codebase from Xamarin.Forms to .NET MAUI
- Maintained appointments management, inventory tracking & data sync
- Implemented MVVM for clean separation of concerns and scalability
- Resolved Android/iOS platform-specific UI & compatibility issues
- Improved startup time and memory efficiency via framework optimisation
- Updated all third-party libraries to .NET MAUI-compatible versions
- Integrated REST APIs for secure backend communication
- Performed extensive testing, debugging & production performance tuning

### Clipboard v24 – Mobile App Maintenance & Enhancement

Sept 2025 – Present

Ongoing maintenance and feature enhancement of the Clipboard v24 mobile application using .NET MAUI and .NET Core backend APIs.

- Maintained & enhanced mobile app using .NET MAUI and MVVM
- Maintained and updated backend REST APIs with .NET Core
- Added new features aligned to business and user requirements
- Optimised UI, API calls, and data processing for better performance
- Implemented bug fixes and stability improvements
- Ensured seamless integration between .NET MAUI app and backend APIs
- Validated APIs with Postman and SQL Server database testing
- Followed Agile methodology for continuous delivery

3

## TraceableGO Plus – MAUI Migration with BLE Integration

Sept 2025 – Jan 2026

Migrated the TraceableGO Plus application from Xamarin.Forms to .NET MAUI and implemented full Bluetooth Low Energy (BLE) communication for temperature and environmental data loggers.

- Migrated app from Xamarin.Forms to .NET MAUI for long-term support
- Implemented BLE scanning, pairing, connection management & real-time sync
- Handled background BLE communication and automatic reconnection logic
- Integrated device data visualisation and logger configuration features
- Resolved platform-specific Android/iOS BLE compatibility issues
- Implemented secure offline data storage and synchronisation
- Improved app performance, stability, and maintainability post-migration

## Aspire – Shopify Azure Integration

Apr 2025 – Sept 2025

Designed and implemented Shopify inbound/outbound API integrations on Microsoft Azure, replacing a legacy Jitterbit solution with a modern serverless architecture.

- Built Shopify API endpoints for order, inventory & fulfilment sync
- Developed Azure Functions to handle webhooks and automate processing
- Migrated Shopify integrations from Jitterbit to Microsoft Azure
- Implemented serverless, event-driven architecture with Azure Functions
- Integrated Azure services with .NET Core APIs for secure communication
- Managed and optimised SQL Server databases using SSMS
- Validated APIs with Postman for data accuracy and reliability
- Added logging, error handling & monitoring for production stability

5

## Cineplexx – Movie Booking App

Nov 2024 – Feb 2025

Developed a cross-platform mobile application for browsing movies, selecting seats and booking tickets, with QR-code digital ticket generation.

- Built movie listing with trailers, showtimes & real-time seat availability
- Implemented interactive seat selection and booking flow
- User authentication, profile management & booking history
- QR code-based digital ticket generation
- Push notifications for booking confirmations and promotions
- Applied MVVM architecture for scalability and code separation
- Initially built with Xamarin.Forms, later migrated to .NET MAUI

## AutoVHC – Vehicle Health Check System

Oct 2024 – Nov 2024

Migrated and enhanced a vehicle inspection app for automotive dealerships, enabling faster diagnostics and improved customer transparency.

- Planned and executed complete migration from Xamarin to .NET MAUI
- Enhanced UI/UX for a modern and intuitive interface
- Integrated service checklists, photo uploads & technician notes
- Optimised performance to reduce load times and improve responsiveness
- Conducted extensive testing for feature parity and smooth UX
- Achieved better scalability, stability and faster load times
- Delivered a cleaner codebase with improved cross-platform support

7

## Sure Basket – Grocery Delivery App

Jul 2024 – Oct 2024

Cross-platform grocery shopping app with real-time product browsing, integrated payments, and live delivery tracking.

- Built real-time product browsing with categories and search
- Seamless order placement with integrated payment system
- Live delivery tracking and full order history
- Integrated with the Sure Basket API for real-time data syncing
- Ensured cross-platform compatibility for Android and iOS
- Prioritised performance optimisation and clean user flows
- MVVM architecture to separate UI and business logic

Tech: [\[C#\]](#) [\[.NET MAUI\]](#) [\[REST APIs\]](#) [\[MVVM\]](#) [\[Android\]](#) [\[iOS\]](#) [\[Payment Integration\]](#)

8

## SMGJ Mahuva – Event Hall Booking App

Apr 2024 – Jul 2024

Migrated event hall booking app from Flutter to .NET MAUI, improving performance, maintainability, and cross-platform consistency.

- Executed full migration from Flutter to .NET MAUI
- Preserved all existing functionality during migration
- Redesigned UI/UX for a smoother user experience
- Implemented hall availability lookup, date selection & booking confirmation
- Integrated backend API for real-time hall booking and schedule data
- Improved responsiveness, load times and overall performance
- Applied MVVM for clean separation of concerns

Tech: [\[C#\]](#) [\[.NET MAUI\]](#) [\[MVVM\]](#) [\[REST APIs\]](#) [\[Android\]](#) [\[iOS\]](#)

9

## Chemical Inventory Management System

Dec 2023 – Mar 2024

Web-based inventory management system for tracking chemicals in a university laboratory environment with barcode scanning and compliance reporting.

- Barcode-based stock tracking and inventory scanning
- Role-based access control for admin, faculty and lab staff
- Chemical entry management with expiry tracking & safety details
- Stock issue/return logs with real-time quantity updates
- Reporting dashboard for low-stock alerts and usage history
- MVC architecture for structured and maintainable code
- Audit logging for data accuracy, traceability and user accountability

Tech: [\[ASP.NET Core\]](#) [\[Entity Framework Core\]](#) [\[SQL Server\]](#) [\[MVC\]](#) [\[Barcode\]](#) [\[Web\]](#)

10

## Certapro Cleaner – Carpet Cleaning Service App

Aug 2023 – Dec 2023

Migrated carpet cleaning service booking app from Flutter to .NET MAUI, with redesigned UI/UX and full backend API integration.

- Migrated from Flutter to .NET MAUI preserving all functionality
- Redesigned UI/UX for a smoother customer-facing experience
- Implemented availability lookup, booking confirmation & user auth
- Integrated backend API for real-time schedule and booking data
- Improved responsiveness and load times post-migration
- Applied MVVM architecture for clean code management
- Ensured cross-platform compatibility on Android and iOS

Tech: [\[C#\]](#) [\[.NET MAUI\]](#) [\[MVVM\]](#) [\[REST APIs\]](#) [\[Android\]](#) [\[iOS\]](#)

11

## Tygo – eSIM & SIM Card Purchase App

Aug 2022 – Aug 2023

Mobile application for the Saudi Arabian market enabling instant eSIM purchase, SIM card ordering, KYC verification, and mobile plan management.

- Instant eSIM purchase & activation via QR code scanning
- Physical SIM ordering with doorstep delivery tracking
- KYC integration with ID verification and user onboarding
- Mobile number selection, plan browsing and in-app payments
- Backend via ASP.NET Core Web API integrated with telecom provider systems
- Token-based authentication and HTTPS for secure data handling
- Right-to-left (RTL) language support for Arabic users

Tech: [\[C#\]](#) [\[Xamarin.Forms\]](#) [\[ASP.NET Core Web API\]](#) [\[MVVM\]](#) [\[Token Auth\]](#) [\[RTL\]](#)

Google Play

12

## Calipds Railway Corridor – WPF Desktop Application

*Jul 2020 – Dec 2020*

Desktop application for managing and monitoring railway corridor operations, featuring real-time train tracking, schedule management and incident reporting.

- Real-time tracking and visualisation of train movements
- Schedule management and alerts for delays or maintenance windows
- Data entry and reporting tools for corridor inspections
- User authentication with role-based access control
- MVVM architecture for UI and business logic separation
- Entity Framework with SQL Server backend for data persistence
- Custom controls and data bindings for rich responsive UI

Tech: [\[C#\]](#) [\[WPF\]](#) [\[MVVM\]](#) [\[Entity Framework\]](#) [\[SQL Server\]](#) [\[Windows\]](#)

13

## Moneeyman – Expense Tracker App

*Mar 2019 – May 2020*

Cross-platform mobile expense tracking application with interactive spending visualisation, detailed reports and multi-device synchronisation.

- Recording and categorising daily expenses
- Visualising spending patterns on interactive maps
- Generating detailed reports and summaries over time
- User authentication and data synchronisation across devices
- MVVM architecture for clear UI and business logic separation
- Backend API on ASP.NET Core and SQL Server for secure storage
- Performance optimisation and offline data handling

Tech: [\[C#\]](#) [\[Xamarin.Forms\]](#) [\[ASP.NET Core\]](#) [\[SQL Server\]](#) [\[MVVM\]](#) [\[Android\]](#) [\[iOS\]](#)
